Automated Analytics Virtual Tech Sprint

04 Nov-09 Dec 2020

SOFWERX, in concert with the USSOCOM Joint Acquisition Task Force (JATF), hosted a series of events to identify technologies to assist with automated analytics during Phase 0 Irregular Warfare (IW) operations.

USSOCOM sought to take advantage of the capabilities of artificial intelligence running on edge computing platforms to provide SOF teams with the organic capacity to distill mission-relevant information from Operator-born sensor data. Their goal was to automate analytics at the tactical edge.

Event Outcomes

•   Out of 54 submissions, USSOCOM selected 6 organizations to virtually collaborate, further develop, and integrate their technologies and concepts into an automated analytics system-of-systems.

•   On 08-09 December, capabilities were demonstrated to Government Stakeholders for assessment and evaluation.
