

Boys and Girls Club 5-Week STEM Program

14 Jun-19 Jul 2021

SOFWERX, in collaboration with the local Boys and Girls Club, facilitated a 5-week STEM Program for middle school students. This series of events was designed to increase the students' knowledge about how design thinking, innovation, and collaboration are utilized at SOFWERX.

Event Outcomes

- 15 middle school students participated in multiple hands-on activities, both virtually and at the SOFWERX facility.
- Activities included a mock Collaboration Event (CE), an aerodynamics exercise, the building of gliders, and solderless radios.
- SOFWERX looks forward to more STEM programs, as more opportunities arise to host young innovators interested in science, technology, engineering, and mathematic career fields.
