

Dry Combat Submersible (DCS) Transporter Collaboration Event (CE)

10 June 2020

Event Outcomes

SOFWERX, in concert with USSOCOM PEO-Maritime (PEO-M), hosted a virtual Collaboration Event, with Industry, Academia, and Laboratory partners, to identify solutions to Dry Combat Submersible (DCS) Transportation.

During this event, Warfighters interacted with potential solution offerors and further communicated operational needs. Insights were provided to ensure potential offerors understand the problem sets fully and to increase the likelihood of matching their technologies with Warfighter needs.

This CE also allowed attendees to virtually meet and form partnerships that may provide a more comprehensive solution to USSOCOM.

- More than 50 Government and Industry outstations participated virtually.
- Government SMEs presented their focus areas and allowed Industry, Academia, and Labs to ask questions to further understand their operational needs and desirements.
- This event provided a greater understanding of USSOCOM and Warfighter needs to individuals looking for the opportunity to be selected to present their solutions to the USSOCOM evaluation panel during the 12-13 August Assessment Event.
