

# The University of South Florida Hack-a-Bull

24 March 2018

Event Outcomes

On 24 March 2018, SOFWERX sponsored and attended the first University of South Florida (USF) hacking event, Hack-a-Bull. Several hundred college students, representing multiple colleges in Florida, gathered at USF to participate in 24 hours of coding and hacking. Throughout the course of the event, several challenges were presented to the students to be solved using their coding skills. Presentations were also offered to expand the participants knowledge of the coding world.

- SOFWERX had the opportunity to meet with many of these students and discuss the coding and hacking opportunities offered at our company.
- SOFWERX spoke with many of the attending students about the SOFWERX business model and how cyber fits into the professional world.
- All of the students who came by the SOFWERX booth joined the SOFWERX ecosystem.
