

Integrated Tactical Mission System (ITMS) Capability Collaboration Event

28-29 August 2018

On 28–29 August, SOFWERX, in collaboration with USSOCOM, hosted a Capability Collaboration Event to identify Integrated Tactical Mission System (ITMS) technology limitations and explore opportunities to overcome them. The purpose of this ideation session was to inform PEO-FW of the current and near future capabilities that could potentially satisfy the ITMS for the MC/AC-130 platforms, and assess the required overarching architecture to integrate legacy systems into a single unified process.

Event Outcomes

- 27 representatives from Government, Industry, and Academia attended the collaboration session to make improvements to the desired categories:
 - Allocation of tasks and processing to federated systems
 - Identification of gaps and conflicts within current system
 - Increased processing
 - Lower mean time between failures (MTBF)
- PEO-FW was informed of the current and near future capabilities that could potentially satisfy the ITMS for the MC/AC-130 platforms.
