

# SOFWERX

## Rapid Integration Effort

10-19 October 2018

Event Outcomes

SOFWERX, in collaboration with United States Special Operations Command (USSOCOM), conducted a rapid integration effort in Tampa, FL, to augment existing hardware capabilities with complementary software applications. The object of the effort was to demonstrate novel tactical capabilities with computing hardware and sensors integrated with software developed during the event. Multiple proofs-of-concept and prototypes in the realms of situational audio, communications, navigation and performance sensing were demonstrated at the conclusion of the event.

- USSOCOM selected 8 subject matter experts, 15 TALOS vendors (SEI, DI, Draper, and MITRE), C4I, ST & FW representatives, AMI, and the TALOS Team as participants.
- Almost 20 capabilities, mostly software, were demonstrated.
- Broad scope of the RPE allowed creativity in problem-solving.
- Attendees worked on self-formed project teams led by TALOS team leads.
- RPE deliverables completed and used for 2019 planning.
