

SOFWERX Medical Wearables Expo

1 December 2017

On 1 December 2017, SOFWERX, in collaboration with MD5, hosted a Medical Wearables Expo. Twenty companies exhibited cutting-edge medical wearable technologies from around the globe.

This event was the kickoff for the 3-day medical wearables hackathon hosted by SOFWERX in collaboration with MD5. The expo gave hackathon participants the opportunity to see state-of-the-art medical technology before they began creating their own medical wearable technologies.

Event Outcomes

- The Medical Wearables Expo gave the subsequent hackathon participants the chance to see the current state of medical wearable technology as well as offer inspiration for ideation sessions to follow.
- USSOCOM and event attendees were exposed to new, novel, and provocative medical wearable technologies.
- Connections were made between participating government, industry, academia, and lab representatives.
- The expo gave the 20 attending companies the opportunity to be subject matter experts throughout the event to offer insight to participants.
